

The 17th CDB Lecture

Masayuki Miura

The University of Tokyo

Monday, January 30, 2017
16:00~ C1F CDB Auditorium

Biology of cell destruction: active roles of cell death in development and organismal homeostasis

Masayuki Miura is Professor of Department of Genetics, Graduate School of Pharmaceutical Sciences, The University of Tokyo. His research interest is to reveal the physiological roles and basic mechanisms of cell death in development, regeneration and tissue homeostasis. By using genetic, biochemical and bioimaging approaches, his research goal is to understand how organisms coordinate cell destruction and generation to establish and maintain tissues. He is Chair, the Board of Directors, The Japanese Society for Cell Death Research.
